Bilateral Meetings

- Tuesday 12:30-13:30

Description

Polytechnic School in Subotica has been educating students for more than 60 years now with a mission to:

- foster quality relationships
- practise modern and efficient teaching
- constantly seek for new ideas to develop and implement better learning techniques
- adapt to the needs, abilities and interests of students
- encourage personal development, create work habits and improve the various skills of students

We have been continually educating our students in various general and vocational subjects and by constant high-quality professional training according to the given curriculum. Our goal is to prepare them for the school leaving examination, further education or to meet the needs of the labor market, but above all, to allow and help them to:

- become fully ready for integration into the community
- be trained to work in the profession and
- have a solid foundation for continuing their education

As a result of the above mentioned, more than 8,000 students have completed their studies and training in three professional fields in our vocational school, out of which the most in the field of **Geodesy** and **Construction**, more than 2,000 in different educational profiles of **Forestry and Wood Processing** and almost the same number in the field of **Graphic Arts - Typography**. Beginning from September 2015, we have been educating our students in the professional field of **Culture, Art and Public Information** as well.
